

Value added services

Additional services make all the difference. We call it warehousing plus: your goods arrive at Rulewave's facility and we ensure that they leave our warehouse according to your exact specifications: packed, mixed, labelled or sealed.

Bagging solutions

We like to serve as an extension of your own production facility. Our additional services enable you to transport your products in bulk, after which we process and prepare them for delivery. Take our bagging solutions, for example. You send us big bags and we turn them into handy-sized bags for the end user, perhaps with different brand labels.

Where required, we can keep the bulk product in store for you supplying the desired quantities as requested.

Tailored services

In consultation, we can provide a range of tailored services. For example, we have our own shrink wrap machine, which is used to wrap a protective film around your packaging. Or we can mix your products to create a new end product with a different composition. Feel free to enquire about the specific options open to you – no strings attached.
