

Warehousing

You want secure storage for your goods at a central location, with maximum service? Rulewave has 10,000 m² of storage space that meets the most stringent safety and quality requirements.

Focus on service and safety

When it comes to shipping, forwarding and warehousing, we aim to offer you the highest level of service. At Rulewave, everything is in one place. In our warehouse, we use an advanced warehouse management system (WMS) that facilitates worldwide JIT deliveries. The safety of your goods is guaranteed, thanks to a complete sprinkler system and a biometric security system that only allows authorised personnel to

enter the facility. Hazardous materials? No problem. Our chemical storage procedures are fully compliant with REACH 3 regulations.

Bonded facility

We are specialised in the storage of products for the offshore industry: chemicals and drilling solutions destined for use outside Europe. Are your goods only making a stop-over in our warehouse? In that case, it's good to know that Rulewave's warehouse is a bonded facility. So no need to import and export your cargo and no VAT or customs duties to pay. As an Authorised Economic Operator (AEO), we enjoy an excellent relationship with the customs office – which will definitely work to your advantage.
